DESCRIPTION:

Prepare your-self as now you have a goal to start and finish your flight from a gate or parking. Starting on the runway is rubbish. Starting on a runway can cause you to forget things. The number one mistake is checking your fuel before departure.

Animated Gates is FSPassengers friendly. Why your FSPassengers is boarding, your aircraft is getting fully serviced. This gives you time to make sure your properly set up for less mistakes and more enjoyment.

Animated Gates 2010 is controlled by two simple frequency's that you set in your radio stack. One calls the gate only, the other calls both service vehicles and gate. Simply remove the frequency to retract gate. Reverse animation is engaged. There are two gates ready to service 128 aircraft reconized by by Acti-Gate. This way the gate knows where to line up for accurate alignment on the aircraft doors.

Animated gates requires no setup and is ready to go at listed airports. You can add extra planes through Acti-gate. Acti-gate was made by Arno at FS Developer and was donated to Animated Gates 2010. Check out FSDeveloper.com

ANIMATION:

A fully animated marshaller who will marshall you forward, then he slowly raises his arms to slow you down as you approach the perfect stopping position. The Marshaller is included at all gates and cargo.

Also included is a very nice docking system mounted on every wall for gates 00 and 01. Extremely accurate for those days when visibility is harsh. If you go to far, the docking system will flash a warning to go back. A green stop light will appear if you stop correctly. The pushback car is static with high detail.

Very nice detailed animated service vehicles:

Gates, stairs, cargo loaders, fuel truck, fuel hoist, American flag and food truck. These vehicles have a limit of 4000 polys. This way I can add multiple conditions.

Animated Gates 2010 has night textures and custom ramp lights that light up the ground. Also an American animated flag that lights up. There's a png included for your own custom airline banner. Your banner is mounted on each building as a billboard.

Tip:

Best used with default airports.

Default Airport!

Just remove a your addon airport from your settings, then scenery library in the game,

temporarily.

Custom Addon Airport Conflicition!

If you want to use your addon instead. Just remove the Animated gates 2010 Airport from your game scenery library.

Making my project work with addon scenery is not always possible. I would have to remove bgl's from payware addons. This would look horrible and be wrong to do. Most payware addons have really nice gates. So where ever you have a conflict. Just make a choice which to keep. Sometimes you can use both.
