

SPECIAL THANKS – LES O'REILLY

Flysimware would like to give special thanks and credit to Les O'Reilly for his work and contributions to several of our aircraft products.

Les has generously contributed his work to these projects, including his custom LesIsMore instruments and improvements to the Garmin GTX 345 transponder and Garmin G5.

His contributions are included in the following Flysimware products:

- C24R Sierra
- Cessna 414AW Chancellor
- Learjet 35A
- Lancair Legacy

The G5 implementation is credited as the LesIsMore Instrument G5, along with additional LesIsMore gauge work used throughout these aircraft.

We greatly appreciate Les taking the time to develop, improve, and share this work with Flysimware for use in our commercial products. His help has contributed directly to improving the functionality and realism available to our customers.

Thank you, Les O'Reilly, for your continued support and contribution to Flysimware.
